PROFILE SUMMARY

Junior DevOps Engineer with 2+ years of DevOps and Cloud Engineering experience in automation, build and release, infrastructure provisioning, and CI/CD in cloud-native environments. Skilled in AWS services, Terraform, Python, Docker, and Kubernetes. Proven ability to manage scalable and secure deployments using infrastructure-as-code practices and scripting tools.

EXPERIENCE

YDI Solutions, Bengaluru, India

June 2023 – Present

Role:- Junior DevOps Engineer

Responsibilities:-

- Supported and maintained end-to-end CI/CD pipelines across multiple environments, using **Ansible** and **Terraform** for consistent configuration management.
- Ensured 100% uptime of business-critical services through proactive patching and monitoring with **Prometheus** and **Grafana**.
- Installed and configured **Jenkins** from scratch on AWS, migrating jobs from a legacy server and integrating **GitHub** authentication with webhook-driven build triggers.
- Automated infrastructure provisioning with **Terraform** for EC2, IAM, VPC, and Lambda; authored reusable IaC modules.
- Wrote custom python boto3 scripts to check the limits of aws services using **Trusted Advisor Service** and alert DevOps team using **SNS Topic** when the service usage reached to warning (50%) and critical (80%) To increase the service limit capacity.
- Used **MySQL**, **Dynamo DB** and **Elastic ache** to perform basic database administration build.
- Created **JIRA** issues to prioritize what's important, and stayed up to date with what's going on around the project.
- Built a highly scalable and fault tolerance architecture using **terraform and cloud formation** on AWS and Created self-healing system configurations using **ELB, Auto Scaling**
- Used **Kubernetes** to deploy scale, load balance, scale and manage Docker containers with multiple **namespaced**.
- Built Docker images and orchestrated deployments on **Amazon EKS** and **Red Hat OpenShift** using **Helm** charts and GitOps workflows with **Argo CD**.
- Managed and secured 180+ AWS EC2 instances for multiple clients, implementing scheduled **EBS** snapshots and **S3** lifecycle archiving for cost-effective retention.
- Instrumented infrastructure and network health with **Prometheus**, **Grafana**, **CloudWatch**, **Icinga2**, and the **ELK** stack.
- Diagnosed and resolved firewall, DNS, and Linux-level networking issues affecting container communication.

TECHNICAL PROFICIENCY

Languages:	Java, Python
Scripting Languages:	Python
CI Tools:	Jenkins
Deployment Tools:	Ansible
Build Tools:	Maven
Repositories:	Git, GitLab, GitHub
Cloud Computing:	Amazon Web Services , Azure
Methodologies:	AGILE
Databases:	MySQL, Mangodb Atlas
Operating Systems:	Windows, Linux
Containers:	Docker, Kubernetes, Openshift
Web Servers:	Apache, Nginx
HashiCorp Tools:	Terraform
Code Quality Tools:	SonarQube
Monitoring Tools:	Prometheus, Grafana

EDUCATION

Master of Computer Applications (MCA) – Cloud Computing	2023 - Present
JAIN (Deemed-to-be University), Bengaluru. CGPA: 9.5	
Bachelor of Science (BSc) in Computer Science	2023
Government Science College, Bengaluru. CGPA 6.6	

CERTIFICATIONS

JAVA and DevOps (JSpiders) • **Python** (Kaggle) • **AWS for Developers** (LinkedIn) • **DevOps Foundations** (LinkedIn)
